👤 Senior Software Engineer 🕒 7 Years

Profile

Full-Stack React Developer with 7+ years of experience specializing in the **MERN stack**, **AWS**, and **Web3 (Solidity, DApps)**. Proven track record of building **scalable, high-performance web applications** and reusable frontend architectures. Skilled in **Next.js**, **Node.js**, **MongoDB**, **CI/CD**, and **cloud-native** deployments. Adept at translating complex requirements into elegant user experiences with a strong focus on **performance**, **maintainability**, and **clean code**. Committed to delivering **innovative and business-driven solutions** in fast-paced, agile environments.

Work History

📅 06/2024 – PRESENT 📍 CHENNAI

Senior software engineer **Aequalis Software Solutions**

- Developed the Background Verification service as a Backend Engineer, which streamlined the verification process for users.
- Designed and implemented robust APIs, helping to improve system communication and enhance overall performance.
- Collaborated with cross-functional teams to integrate third-party services, which expanded the service capabilities and improved user experience.
- Conducted thorough testing and debugging of the backend systems, ensuring high reliability and

Work History

reducing downtime.

- Optimized database queries and server performance, resulting in faster response times and a smoother user experience.
- Documented all processes and code changes, which facilitated better knowledge sharing and onboarding for new team members.
- Participated in code reviews and provided constructive feedback, helping to maintain high-quality standards within the team.
- Collaborated closely with clients to define problem specifications and develop system designs.
- Conducted extensive research and analysis on data processing functions, methods, and procedures.
- Spearheaded project development based on customer requirements.

📅 12/2023 – 06/2024 📍 CHENNAI

Senior Software Developer- 3 **Sysvine Technologies**

- Developed the Journey publication project using React, which enhanced user engagement through a more interactive and streamlined interface.
- Collaborated with the design team to implement user-friendly features, helping to improve the overall user experience.
- Integrated APIs to fetch and display dynamic content, which allowed for real-time updates and kept users informed with the latest information.
- Conducted thorough testing and debugging to ensure high-quality performance, resulting in a more reliable application for end-users.
- Participated in code reviews and provided feedback to fellow developers, which fostered a culture of learning and improvement within the team.

📅 11/2020 – 12/2023 📍 CHENNAI

Software Developer **Aequalis Software Solutions**

- Developed key features for DeFi applications, which enhanced user engagement and streamlined transaction processes.
- Built and maintained NFT websites, helping clients showcase their digital assets effectively and attract a wider audience.
- Created intuitive DEX interfaces, making it easier for users to trade cryptocurrencies and improving overall user satisfaction.
- Collaborated with cross-functional teams to

Work History

ensure seamless integration of front-end and back-end components, which led to smoother application performance.

- Implemented best practices in coding and debugging, helping to reduce the time spent on fixing issues and increasing project efficiency.
- Engaged in regular code reviews and provided constructive feedback to team members, which fostered a culture of continuous improvement and knowledge sharing.

📅 05/2020 – 10/2020

Frontend Developer **Bezohminds**

- Developed single-page applications (SPAs) using frameworks like React, Angular, and Ionic, which enhanced the user experience by providing faster load times and smoother interactions.
- Collaborated closely with designers to implement responsive layouts, ensuring that applications looked great on all devices, which ultimately increased user engagement.
- Optimized application performance through code splitting and lazy loading, leading to a significant reduction in load times and improving overall user satisfaction.
- Conducted thorough testing and debugging of applications, which helped identify and resolve issues early, resulting in more stable releases and fewer user complaints.
- Engaged in code reviews and shared best practices with team members, helping to maintain high-quality standards and a cohesive development approach across the team.

📅 07/2018 – 05/2020

Junior Software Developer **Adcux AI**

- Developed the frontend for a chatbot application, which enhanced user interaction and engagement across platforms.
- Integrated dashboard features that provided users with real-time analytics, helping them make informed decisions based on data.
- Collaborated with backend developers to ensure smooth functionality, improving overall system performance and user satisfaction.
- Implemented responsive design techniques, which allowed the application to work seamlessly on various devices, increasing accessibility for users.
- Conducted testing and debugging to resolve

Work History

issues promptly, ensuring a smooth user experience and reducing downtime.

Projects

📅 01/2025 – PRESENT

Senior Software Engineer Balr

- **Built an AI-powered language agent** for a football application, enabling real-time predictive insights and delivering dynamic content such as match news and analysis.
- Designed and integrated a robust **Evaluation Framework** to validate model accuracy, relevance, and overall system performance.
- Implemented **Retrieval-Augmented Generation (RAG)** to enhance context-aware responses by pulling live football data from multiple sources.
- **Optimized memory usage** and system throughput to ensure smooth performance during high-load scenarios and continuous data processing.
- Continuously monitored agent behavior and fine-tuned logic for improved **response quality, latency, and user experience**.

📅 07/2024 – 02/2025

Full Stack Developer Bilic Verify

- Developed Bilic Verify, a full-stack background verification system that streamlined company hiring processes and reduced turnaround time.
- Engineered a responsive and intuitive **React frontend**, enhancing navigation and simplifying the verification workflow for users.
- Built a robust **Node.js backend**, ensuring secure API communication and improving system reliability and data consistency.
- Led DevOps implementation using **AWS EC2, ECS, and CodePipeline**, resulting in faster deployments and improved infrastructure stability.
- Collaborated with cross-functional teams in an Agile environment, aligning on goals and delivering a scalable, production-ready solution.
- Achieved a **40% performance improvement**, directly enhancing application speed and user satisfaction.

📅 12/2023 – 06/2024

Full Stack Developer Journal and Book Publication

- Developed a full-featured platform supporting

Projects

journals, books, and conference proceedings, fostering cross-disciplinary academic collaboration and research visibility.

- Designed a clean, **responsive UI/UX** that streamlined navigation and improved content discoverability, resulting in higher user satisfaction and reduced bounce rates.
- Implemented **advanced search capabilities** with filters and keyword recognition to enhance information retrieval and save users valuable research time.
- Integrated **citation generation tools**, supporting proper referencing and promoting academic integrity and professionalism.
- Followed **Agile methodology** to meet strict deadlines while incorporating stakeholder feedback and adapting to evolving user needs.
- Delivered **personalized content recommendations**, increasing platform engagement and helping users discover relevant research aligned with their interests.
- Actively conducted **code review sessions**, promoting best practices, improving code quality, and mentoring junior developers for consistent delivery standards.

📅 07/2023 – 11/2023

Full-Stack Developer CAMBI Loyalty Program

- Developed a scalable **loyalty program system** with integrated **gift card functionalities** and **mobile notifications**, increasing customer engagement and program participation.
- Led **backend development** using **Node.js**, architecting a robust and high-performing system capable of handling growing user demand seamlessly.
- Collaborated with **design and marketing teams** to craft an intuitive user experience that improved **customer satisfaction and retention metrics**.
- Performed **comprehensive testing and debugging**, significantly reducing platform downtime and ensuring a stable and reliable user experience.
- Implemented **serverless architecture** using **AWS Lambda** and **DynamoDB**, enhancing system efficiency, scalability, and cost-effectiveness.
- Participated in **code reviews** to uphold code quality, ensure best practices, and support cross-team collaboration throughout the development cycle.

Projects

📅 01/2023 – 06/2023

Full-Stack Developer and Frontend Team Lead

YearnTogether

- Developed **Yearn Together**, a decentralized platform combining **gamification** and **community-driven mechanics** to boost user engagement and attract a diverse global audience.
- Led **frontend development** using **React**, delivering a responsive and intuitive UI that significantly improved **user retention** and community interaction.
- Engineered the **Node.js backend** with **Web3 integration**, ensuring secure on-chain interactions and building user trust through transparency and decentralization.
- Designed and implemented **incentive-based features** that rewarded community participation, leading to a measurable increase in active users and engagement.
- Adopted **Agile methodology**, maintaining delivery flexibility and adaptability to evolving user feedback and feature scope.
- Managed **deployment infrastructure** with **AWS CodePipeline, EC2, and ECS**, streamlining CI/CD and ensuring a **scalable and reliable production environment**.
- Participated in regular **code reviews**, promoting team-wide code quality, consistency, and technical mentorship.

📅 04/2022 – 01/2023

Full-Stack Developer and Dapp Tech Lead

GIANT Protocol

- **Led the development** of GIANT Protocol, a decentralized platform enabling users to earn **crypto rewards** via **eSIM activations** with providers like Airalo, improving **global mobile connectivity** and user autonomy.
- Oversaw the end-to-end development of the **DApp**, ensuring a **seamless user experience**, optimized performance, and high user engagement.
- Architected and integrated a custom **Strapi CMS**, improving content delivery workflows and enhancing operational efficiency for non-technical stakeholders.
- Leveraged **AWS S3 and DynamoDB** for efficient, scalable, and reliable data storage and retrieval,

Projects

supporting a growing global user base.

- Integrated **Polkadot smart contracts**, strengthening **cross-chain interoperability** and **security**, laying a foundation for future expansion into multi-chain environments.
- Participated in **code reviews** and technical planning sessions to maintain development quality and guide architectural decisions.

📅 01/2021 – 03/2022

Full-Stack Developer and Team Lead

Creatverse NFT

- Led the frontend development team for CREATVERSE, a blockchain-based social network focused on creative portfolios, ensuring a seamless user experience for both creatives and curators.
- Developed and implemented the Strapi content management system, simplifying content updates and management which made it easier for users to showcase their work effectively.
- Integrated Solidity smart contracts to secure copyright registration for authors, helping them protect their creations while facilitating direct distribution to their fans.
- Managed the integration of IPFS file storage, enhancing data security and accessibility for users, which ensured their work is safely stored and easily retrievable.

📅 11/2020 – 12/2021

Full-Stack Developer and Frontend Team Lead

DSCVR Finance

- Led the frontend team for the UniLend project, which is a decentralized protocol that enables spot trading and money market services, enhancing the user experience for trading and financial transactions.
- Developed and integrated smart contracts using Solidity, which streamlined lending and borrowing processes, helping to ensure that transactions were secure and efficient.
- Collaborated closely with cross-functional teams to align technical development with project goals, which improved overall project coherence and functionality.
- Implemented best practices in frontend development, which not only boosted performance but also made the platform more accessible to users.
- Fostered a collaborative team environment,

Projects

helping to mentor junior developers and enhance their skills, which strengthened the team's capabilities and productivity.

📅 05/2021

Full-Stack Developer Chitta Interface

- Developed a blockchain-based certificate system, which created new financial opportunities for users by ensuring secure and verifiable credentials.
- Managed the integration of React-Map-GL, enhancing the user experience with interactive maps that provide real-time data visualization.
- Oversaw project development from conception to completion, helping to streamline processes and improve overall efficiency.
- Collaborated with cross-functional teams, fostering communication and teamwork that contributed to the project's success and timely delivery.

📅 07/2021

Full-Stack Developer and Team Lead Cypro Dex Interface

- Led the architecture and development of the Cypro Dex Interface, which enabled traders to access optimal spreads and minimize transaction failures.
- Developed and managed the Amplify framework, helping to streamline the project's backend processes and improve overall performance.
- Created a robust Strapi backend, which simplified content management and enhanced the user experience for traders.
- Integrated APIs using React's useQuery, which facilitated seamless data fetching and improved the responsiveness of the application.

📅 05/2020 – 11/2020

Web Developer Omniplexus

- Designed and developed the Omniplexus platform, which serves as a robust engine for seamless information flow between various devices, applications, and systems.
- Integrated APIs to enhance connectivity and communication capabilities, helping ensure stable and secure channels for data exchange.

Projects

📅 11/2019 – 05/2020

Web Developer Azure Power Plant

- Developed a system to monitor and record all energy sources, which ensured accurate data collection in the database.
- Designed and implemented an API integration, helping authorized employees access vital analytics and performance metrics from anywhere.
- Created a user-friendly interface for displaying performance reports, which improved the way employees could track and analyze operational data.

📅 07/2018 – 10/2019

Frontend Developer Log-N-Solve

- Designed and developed a voice-based web and mobile chatbot, which improved user interaction and engagement on our platform.
- Enhanced product features based on user feedback, helping to address customer needs and increase satisfaction.
- Managed Node-Red mapping for the chatbot, which streamlined the integration process and ensured smooth functionality across different devices.
